2.3.2 - Teachers use ICT enabled tools including online resources for effective teaching and learning processes during the year

The teaching-learning process at Vidyasagar University has been realigned and redefined in the light of recent advances in ICT, to make it easier to implement all types of educational learning theories and delivery models that support and encourage innovative teaching and learning modalities, both for theoretical and lab-based courses.

Post Covid-19 faculties were obliged to learn, implement, and use ICT-enabled tools. The faculty use ICT enabled classrooms with LCD projectors, Wi-Fi connectivity, software, PowerPoint presentations developed by teachers to expose the students to advanced knowledge and practical learning.

The University has a Learning Management System (LMS) that encompasses the majority of the teaching and learning process elements. It includes a variety of content management tools and systems that enable 'anytime, anyplace' access. In addition to the institutional LMS, faculty members can use MOODLE, an open source educational software that has been adapted specifically for teaching-learning infrastructure management and administration.

Also, the university has purchased G-suite through which relevant tools can be used for online teaching. The university has its own official YouTube channel for dissemination of digital contents and live classes.
